CURRENT ROLE

Present appointment

2025-present. Postdoctoral Research Fellow, School of Geosciences, University of the Witwatersrand, Johannesburg, South Africa. Research on critical minerals in layered mafic-ultramafic intrusions and Bushveld chromitites, with focus on Ni-Cu-PGE systems and the Critical Zone.

EDUCATION

Degrees

2020. PhD in Geology and Mineral Sciences, defended in 2019; awarded via the Dissertation Council at the V.S. Sobolev Institute of Geology and Mineralogy (SB RAS), with research conducted at the Institute of Volcanology and Seismology (RAS), Petropavlovsk-Kamchatsky.

2017. Saint Petersburg Mining University, Russia. Specialist degree with Distinction in Applied Geology, broadly equivalent to an MSc.

ACADEMIC APPOINTMENTS

Previous roles

2023-2025. Research Associate, School of Earth and Environmental Sciences, Cardiff University, Wales, UK.

2022-2023. Fulbright Visiting Scholar, School of Earth Sciences, University of Oregon, USA.

2020-2022. Research Associate, Institute of Volcanology and Seismology, Petropavlovsk-

Kamchatsky, Russia.

2017-2020. PhD candidate, Institute of Volcanology and Seismology, Petropavlovsk-Kamchatsky, Russia.

2012-2017. Engineer (0.5 FTE), Karpinsky Russian Geological Institute, Saint Petersburg, Russia.

INDUSTRY EXPERIENCE

Applied geology

2018. Geologist (summer fieldwork), Kirganik Ltd. (Amur Minerals subsidiary), Kamchatka, Russia.

2016-2017. Geologist (summer fieldworks), Kamp Ltd., Kamchatka, Russia.

2015. Field technician (summer fieldwork), Kamchatgeologia, Kamchatka, Russia.

TEACHING

Teaching and supervision

Guest lectures and practical teaching at the University of the Witwatersrand, Cardiff University, and the University of Oregon across mineral deposits, petrology, field geology, and geohazards.

2025-present. Supervisor of the project "Mineralogy of the iron-rich ultramafic pegmatites, eastern Bushveld Complex" (student: Botshelo Tshite).

PROFILE

Selected strengths

Research focus: petrology and mineralogy of mafic-ultramafic and island-arc systems, chromitites, PGE mineralogy, oxygen isotopes, and critical minerals.

Methods: SEM-EDS, Raman spectroscopy, EPMA, LA-ICP-MS, isotope geochemistry, Python workflows, MELTS and MAGEMin modelling.
